Central Ukrainian State

Projects:

https://github.com/Rombt/gulp-assembly
> Easily create, edit and display a grid on a page
> Font transformation to WOFF and WOFF2 formats, fonts file creation
> Image optimization to WebP format with JPEG fallback for older browsers
> Optimization and compression of styles and JavaScript into a single files
> SVG sprite creation, ZIP archive creation, FTP deployment to hosting
> And many other features
> **node.js, GULP, WebPack, OOP**

http://rombt.free.nf/
> Semantic page markup (*html, less*)
> JavaScript: **jQuery, Ajax,** *and* **Swiper.js** for sliders
> Integration of the completed markup into **WordPress**
> Custom theme functionality in a core plugin
> Post Types: **ACF, add_meta_box()**
> For each custom post type, the field values can be edited directly on the post page (**Ajax, jQuery**).
> WooCommerce: The theme is fully integrated with WooCommerce.
> Redux: The theme offers many options, including typography settings

horizontal-menus
> Managing the behavior and state of horizontal menus on the page
> Overflow protection, responsive, animation, easy addition of additional cla
> And many other features
> **js, less, GSAP, OOP**

http://impexmash.free.nf/
> It was a very old and neglected website.
> Developed a **WordPress** template with additional functionalities
> **html, less, js**
